

## Sustainable Development Policy

Sustainable development is commonly defined as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. For **CGG**, sustainable development means the ability to successfully deliver geoscience services and products to the market while preserving the environment and caring for our employees and the communities in which we have the privilege to operate.

**CGG** commits to engage in a transparent dialogue with its stakeholders to identify their expectations and ensure that our activities address key sustainability issues for our industry.

**CGG** is a member of the United Nations Global Compact and recognizes and promotes the ten principles which are derived from:

- The Universal Declaration of Human Rights;
- The International Labor Organization's Declaration on Fundamental Principles and Rights at Work;
- The Rio Declaration on Environment and Development;
- The United Nations Convention against Corruption;
- The United Nations Declaration on the Rights of Indigenous People.

**CGG** furthermore complies with social, environmental laws and regulations and industry standards where we work.

**CGG** commitment to Sustainable Development is supported by its Business Code of Conduct, and the policies and practices related to occupational health and wellness, human resources, safety, security, and environment.

To support Sustainable Development, **CGG** commits to:

### Economic Development:

- Create value for clients, shareholders, employees and communities;
- Establish clear and transparent organizational governance;
- Maintain fair operating practices;
- Reject any form of corruption.

### Social Responsibility:

- Strive to develop long-term partnerships and relationships in our key markets;
- Develop and maintain mutually beneficial relationships with the local communities in the vicinity of our sites and projects, sharing goals of economic growth, social progress and environmental conservation;

- Where practicable, develop local content and talent through employment, training, skills transfer and procurement.

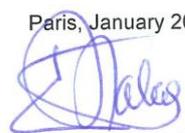

### Environmental Protection:

- Apply ecodesign principles in the development, diffusion and use of new equipment and technologies;
- Wherever possible prevent, or otherwise minimize, mitigate and remediate harmful effects on the environment.

CGG strives to further promote social and environmental responsibility and improve sustainable development performance through periodic management reviews.

Line management has responsibility for achieving specific objectives which support this Policy.
