

PLEXUS

Data management pure and simple

TODAY'S CHALLENGES

Data Volumes

For as long as there has been a requirement to record and manage data, data volumes and associated management challenges have continually escalated.

Robust Management

Proliferation of industry diversification, M&A activities, and continued day-to-day business create a plethora of existing disparate data sources, new data requirements and the need to consolidate.

Cost of Ownership

Of chief concern in today's energy industries is the need to reduce operational costs and the resources required to manage data. Shared cloud platforms, flexible usage plans, and inclusive management options are key.

THE PLEXUS SOLUTION

All the features you need ... none that you don't

- Flexible data source control for energy industries
- Simple searching with intuitive grid, free text, GIS map
- Refined entitlements and permissions
- Easy data ingestion and export
- Business intelligence and SQL custom reporting
- Integrated ETL tools
- Auditing and tracking
- Simple shopping cart ordering

Designed with today's industry needs in mind

PleXus operates as a single cloud portal, able to unite all your data from multiple sources and models, including exploration, production, legacy, new acquisition and M&A imports – it's all there at your fingertips. This gives you true data governance and control over all your data ... simply.

Flexible, online, cloud-ready system

Powerful search and reporting capabilities

Ability to manage both physical and digital assets simultaneously

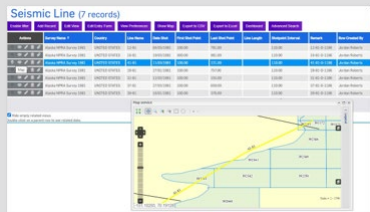

Advanced security and entitlement features, assuring long-term governance

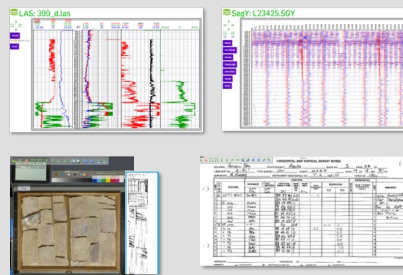

Search

- Single, intuitive dashboard
- Powerful free text search
- GIS mapping
- Flexible data and asset grids

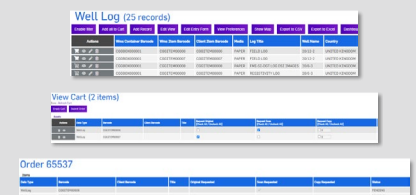

Access and Review

- Easy access to metadata and either physical or digital assets
- Digital assets viewing to assess and confirm

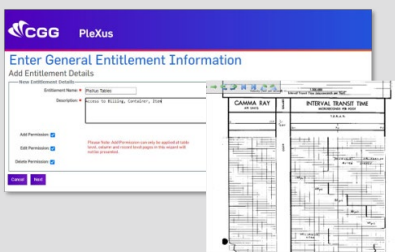

Shopping Cart Ordering

- Simple interface
- Flexibility for physical or digital assets
- Individual or bulk asset ordering
- Secured through permissions and entitlements

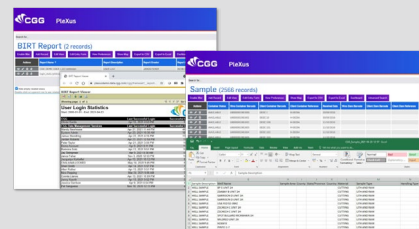

Security and Entitlements

- Customizable entitlement and permissions
- Personal or group entitlement and permissions for tables using roles and even specific records

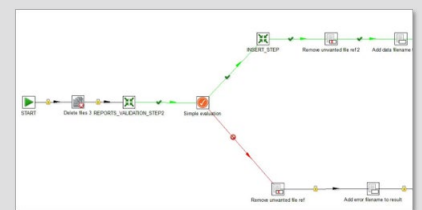

Reporting and Auditing

- BIRT on-demand reporting
- SQL data-generated reporting
- Auditing and history – Specified tracking attributes, mandatory creation data, add, change, delete auditing

ETL Tools

- Data-focused
- Standards control maintenance
- Non-compliance flagging

Get it together with Plexus!
